

# PRANAWIRE LINEBACKERS – POWER CONDITIONNERS

# PRANAWIRE GROUND PLANES – POWER FILTERS

## Ground planes Emerald plus SEGP, Emerald C SEGP, Ruby, SEGP line Models

Stray noise is shunted away from components and irretrievably dissipated into and absorbed by a complex and massive array of materials.

We have been including these in our Linebacker Series In-Line Passive Power Filters for quite some time. Now they are available to manufacturers and hobbyists for inclusion in their products/projects and as stand alone units. Several highly regarded manufacturers are already using them in their products with great benefits.

PranaWire *Super Enhanced Ground Planes* are manufactured with our proprietary multi layer noise cancelling construction formulation. All models but the smallest are tuned with super high quality capacitors for an extended and airy top end. Our highest level models employ the Duelund Cast Silver capacitor - the most highly regarded and most expensive capacitors currently made for truly open and extended top end performance.

Enjoy greater stage depth, 3 dimensional resolution, specificity of instruments' location in space and vastly quieter background. The more components you join to our *Super Enhanced Ground Planes* the greater the effect. Binding post units can accept up to three components per binding post. Our internal *SEGP* boxes elevate the performance of individual components. Systems hooked up to our external, binding post versions exhibit their highest possible intrinsic capabilities with significant improvements in sound stage depth and width, palpability of instruments and musicians, their presence and location in space.

**New!** The Emerald Plus with four binding posts with pure silver goodness, each in it's own drop dead gorgeous hardwood case! And, the Emerald C with three binding posts and pure copper Ground plane.
