

PRANAWIRE CABLES

PRANAWIRE NATARAJA

Nataraja Serie

When stripped of all noise, all electronic haze, sound reveals it's true nature.

Inserting a single Nataraja Series cable into your system will uncover new deeper levels of information in a highly musical fashion. Adding more will result in an entirely new appreciation of the music you listen to.

Construction:

The Nataraja series interconnect cables utilize four nines pure silver ribbons that are subjected to multiple treatments and then wrapped with a total of twenty four layers of natural and proprietary space age insulating materials, including four copper foil shields with 51 drain wires on each shield. Construction is painstaking and requires long hours. The resulting interconnect cable is an oval 1 7/8" X 1" in cross section. Avoiding the use of synthetic materials wherever possible is intrinsic to our design philosophy.

The Nataraja Series Speaker Cables consist of two separate 1 1/2" X 1/2" cross section cable assemblies per side and are somewhat more flexible. (Four distinct cable assemblies comprise a pair.) Both speaker and interconnect cables employ reinforced flexible ends for longevity and ease of use. Pure solid silver spade lugs are employed to ensure the tightest fit and greatest transference of energy.

Refusing to accept limitation...
