SECP Super Enhanced Collector / Platforms

PranaWire Super Enhanced Collector / Platforms are designed to be used in conjunction with (connected to) our Emerald SEGP Box, but can be used with similar grounding devices from other manufacturers. They are designed to be used under components as they serve two important functions: 1. They absorb and mitigate the effects of micro and macro vibrations affecting the equipment and 2. They draw noise away from the component in a very significant fashion and deliver it to the massive internal collector plate and then dissipate it as heat into the materials surrounding it. Any noise not disposed of there is shunted to the SEGP box which completes the process. Our Super Enhanced Collectors, below, are designed to go on top of the component and are connected directly to the SEGP Box or to the Collector Platform. All three devices taken together, the SEGP Boxes, the Collector / Platforms and the Super Enhanced Collectors provide a deep ecosystem of noise reduction and vibration that will take any high end system to unparalleled levels of performance.
