

PRANAWIRE CABLES

PRANAWIRE PHOTON USB

Photon USB - Luminous Ambiance

The cable that interfaces computer or server and DAC is perhaps the most vulnerable of all cables in the system. Parasitic noise from the source and ambient and radiated noise from the environment conspire to mask signal. It is important to remember that the "Ones and Zeros" of a digital stream are delivered as an analog waveform that is subject to all of the same ills that any analog cable is subject to, and that when decoded, the presence or absence of noise will influence how well the decoder behaves. With the Photon USB cable we have applied principles from our other highly successful designs, capturing and immobilizing self-generated and parasitic noise, shielding against the influences of ambient and radiated noise and treating for the ill effects of vibration. This results in the presentation of highly dense, relaxed and natural sounding information that is extremely musical, deeply satisfying and that reveals the original recording with utmost precision and fidelity.

- Pure Silver Signal Conductors
- Multi-layered, quad-shield construction for maximum shielding and noise absorption
- Custom Vibration Damping
- Highest grade gold plated phosphor bronze connectors and custom housing
- Double Cryogenic pre treatment
- Audio Dharma Cable Cooker post construction conditioning for optimum performance

Performance that displays the following characteristics:

- Ultimate clarity, transparency and speed
- Highest density of timbral, spacial and ambient information
- Relaxed natural sound
